

Automotive & Maschinenbau

Unternehmen im Bodenseekreis

The automotive & machine construction sector is at the heart of the economy in the Bodenseekreis district.

ZF-Dream Car:
Autonomes Fahren

Many companies here are suppliers. Well-known examples include transmissions from ZF in Friedrichshafen used in car, truck and bus models, or MTU engines from Rolls-Royce Power Systems that can be found in mining vehicles, locomotives, ships and emergency generators. These drive technology components are an essential part of all of our lives. Other products from the Bodenseekreis district also play an indirect role in consumers' everyday lives. For example, commercial dishwashers made by Winterhalter in Meckenbeuren are used to clean dishes in many restaurants and cafeterias.

Moog in Deggenhausertal makes high-quality under-bridge access units and sells them worldwide. These truck-mounted work platforms are used to inspect and maintain the undersides of bridges – even while traffic is flowing.

Billions of people use products made with or by companies in the Bodenseekreis district every day. Companies on all continents rely on suppliers and manufacturing businesses from here. Entire industries trust in the expertise of global companies and hidden champions from the Bodenseekreis district. Its economic strength has an impact throughout the Lake Constance region. Companies cooperate across borders with partners in Austria, Liechtenstein and Switzerland to form an economic region. That is good for highly qualified employees and start-ups. And it is a guarantee for successful exports – made on Lake Constance.

Freizeit & Gesundheit

Unternehmen im Bodenseekreis

The health economy, tourism, leisure and agriculture sector in the Bodenseekreis district is highly conspicuous and structurally very well positioned.

This also benefits employees in other strong industries in the region such as aerospace, automotive and machine construction, IT and electronics as well as trades and services.

Founded on a passion for mountaineering, VAUDE was established as a producer of outdoor clothing and equipment in the 1970s. VAUDE is an award-winning ecological and ethical pioneer in the textile industry with products that have a positive impact for humans and nature.

A ride in a Zeppelin is a unique touristic highlight. The views of the Bodenseekreis district from above also reveal everyday life on the lake, where the catamarans, ferries and boats are an important part of the transport infrastructure. On land, the roads wind along the lakeshore through apple orchards and vineyards with the Swiss Alps in the background. Who would have thought that one of the strongest economic regions in Germany could also be so attractive?

IT & Elektronik

Unternehmen im Bodenseekreis

While some see the internet as a digital revolution, for others like the so-called Millennials, it was “always there”. For companies, a digitally linked world is also diverse.

Digitalization offers opportunities as well as challenges. It has given rise to new economic sectors and new companies. People skilled in IT and electronics can benefit from fulfilling career opportunities, without having to move to Silicon Valley.

The Bodenseekreis district boasts pioneers in the IT industry, including companies like IHSE from Oberteuringen. IHSE creates KVM – keyboard, video, mouse – technology. Systems made by IHSE can be used to operate several computers remotely, i.e. the computers and their operators are located in different places. This technology has many potential applications – in broadcasters’ studios, in control towers at major airports, on the bridges of ships, in the control rooms of utilities, emergency services and many more. Not to forget at e-sports conventions.

Virus scanners by Avira are used by half a billion users worldwide. The company has its headquarters in the Bodenseekreis district. IT from Lake Constance can also be found on the breakfast table. Have you ever considered while spreading jam on your bread just how jam jars are made? The company futronic from Tett nang develops the high-precision machines required to make them.

There are plenty of reasons why programmers should take a look at the Bodenseekreis district, and not just at the many IT & electronics companies. IT specialists are also in greater demand than ever in machine construction and in aerospace in the context of digitalization and Industry 4.0. And the Bodenseekreis district is home to numerous companies in these industries as well.

Luft- & Raumfahrt

Unternehmen im Bodenseekreis

The Bodensee Aerospace Meeting takes place every year in cooperation with other aerospace clusters and associations. This international specialist event was most recently held in spring 2019, when future developments in the aerospace industry were discussed under the motto "Everything new in aerospace? New Space & New Cabin".

There is literally something in the air

A lot is happening in the aerospace industry in the Bodenseekreis district apart from the companies themselves: The Dornier Museum celebrated its 10th anniversary in 2019, and the Zeppelin Museum continues to convey the fascination of aviation to visitors. Tomorrow's aviation specialists are trained at the Cooperative State University in Friedrichshafen with its aerospace technology study programme. Bodensee-Airport is an important infrastructural feature, while the aviation trade fair AERO attracts international participants and is an annual highlight for the aviation industry in the region. All these events, institutions and companies create a force, confirming that the Bodenseekreis district is home to a unique aviation and aerospace cluster with potential for growth. Aerospace shapes the region, not just economically.
